These two way tilting large washer extractors, known for their very heavy industrial construction, are currently used for washing of Dustmats but are certainly suitable for other applications like the processing of working gear.

The machines are all equipped with a fully programmable, independent control, on which different parameters can be set individually (e.g. cycle, level, dosage, temperature, speed control, reversing, with/without cool down). All machines are equally equipped with a large simple interface, inverter drive and a large wide opening automatic door for easy loading and unloading (currently by means of a bag system in combination with hopper).

During loading the hopper is automatically placed on the washer which is tilted backwards. Unloading is currently done onto an unloading conveyor while the machine is tilted forwards.

Although these are very large machines it's incredible how quiet they operate, even during final extraction. This is possible thanks to the inverter drive which allows a total flexibility and controlled acceleration for a better distribution of the laundry inside the drum.

**Specifications:**

- Capacity:** 270kg (1:10)
- Drum Ø:** 1630 x 1294 mm
- Drum volume:** 2700 ltrs
- Steam heating (direct steam injection)**
- Year of construction:** 4 machines are from 2000, 1 machine is From 2002.
- Connections:** 2 x DN50 warm & Cold water  
DN180 drain outlet
- G-Factor:** 256G  
speed control by 3Ph AC inverter adjustable between 20-530 rpm
- El. requirements:** 380-400 V/3ph/50Hz
- Inverter drive**
- Net weight:** 8200 kg
- Door diameter:** 1061 mm
- Dims HxWxD:** 2400 mm  
x 2400 mm  
x 3400 mm
- Loading by hopper**

Your one stop shop solution for all your equipment needs.
